

# Qtech-404 Mining Equipment Ultra Anti-Abrasion Polyurea Material PRODUCTION INFORMATION

#### Production Description:

**Qtech-404 Mining Equipment Ultra Anti-Abrasion Polyurea Material** is the state of the art 100% solids, ultra fast cure, flexible, spray-applied, high build, and two components aromatic pure polyurea elastomer. The system consists of A component, a quasi-prepolymer rich of free NCO, and B component, a mixture of polyetheramines, amine extenders and other additives. **Qtech-404** is used by itself or in combination with other materials to produce coatings, liners, wearing courses, and resilient surface on mining equipment surface and other substrates. **Qtech-404** can produce an extremely tough film at all thicknesses; it may be applied in all positions and to any suitably prepared substrate. **Qtech-404** is relatively moisture and temperature insensitive, allowing application in the most problematic ambient conditions. It is the optimum choice where a tough, flexible, impact resistant, abrasion resistant coating surfacing system which exhibits extraordinary performance characteristics.

### Advantages :

- 1. Fast cure, short down time, no sagging
- 2. Excellent Physiochemical Properties
- 3. Bondable and paintable to various kinds of substrates
- 4. Ambient insensitive, good thermal stability
- 5. 100% Solids, No VOC's, Odorless, No Toxic Vapors
- 6. Good resistance to a wide range of chemical attack
- 7. Excellent Abrasion resistance and Impact resistance
- 8. Good weather ability, Added color stability
- 9. Seamless, flexible, slick and non-porous
- 10. No chalking and fading in long-term use outdoors

### **Recommended Uses:**

**Qtech-404 Mining Equipment Ultra Anti-Abrasion Polyurea Material** is an ultra fast cure system; it can be applied at thicknesses of several ten millimeters, or greater, in a single application. It can be widely used in Mineral Equipment, Mineral Processing, Vibration Screen, Ore Washing Roll, Flotation Cell, Ore Bucket; it can also be applied in: Spiral Separator, Pipe Coatings, Grinding Plants, Marine Steel Structure, Truck Bed Liners and so on.

**Physical Properties:** 

Tensile Strength/ MPa	25
Elongation/%	350
Tear Strength/( N/mm)	70
Shore Hardness	≥A-88
Abrasion Resistance /(GB/T 1689-1998, cm <sup>3</sup> /1.61km, mg)	≤0.24mg
Impact Strength/ Kg.cm	70
Friction Coefficient	$0.75 {\sim} 0.85$
Adhesion (steel, Pull off, MPa)	10
Density/(g/cm <sup>3</sup> )	0.95~1.05
Chemical Resistance	No corrosion, No Blister, No Spalling

#### **Product Characteristics:**

Solids/%	100
VOC (calculated)	0
Gel Time/s	12
Tack Free/s	20~30
Shelf Life	6 months, unopened at 15~40 °C
Flash Point/ °C	150
Mix Ratio V/V	1:1
Recommended Spreading Thickness/mm	2~3
Colors	Optional

Drying time is temperature, humidity, and film thickness dependent.

### Chemical Resistance:

Consult our technicist and chemical test date for corrosive environment applications.

# Installation:

Consult our application information and recommended method statements.

# Packaging:

Part A: 220kilogram per drums.

Part B: 200 kilogram per drums. (Custom package available at additional charge)

Qingdao Shamu International Trade Co., Ltd.

#### Notes:

- 1. Qtech product is intended for industrial use by properly trained professional applicators only.
- 2. Thoroughly mix container of B component with an air-driven power mixer for a minimum of 15 minutes prior to application.
- 3. Adding a nitrogen blanket is strongly recommended for use on the "A" component for storage after opening.
- 4. It is a 100% solids production, strictly prohibit add any diluents.
- 5. The quality and fitness of the product is depending upon the proper mixture and application of the component by the applicator.
- 6. This specification is an accumulation of long term testing and experience. Published technical data and instructions are subject to change without notice.
- 7. For more information please contact us or visit our website www.shamu-intl.com and www.polyurea.cn.
